

如何获取AWS的Access Key ID 和 Secret Access Key (Unable to find credentials)

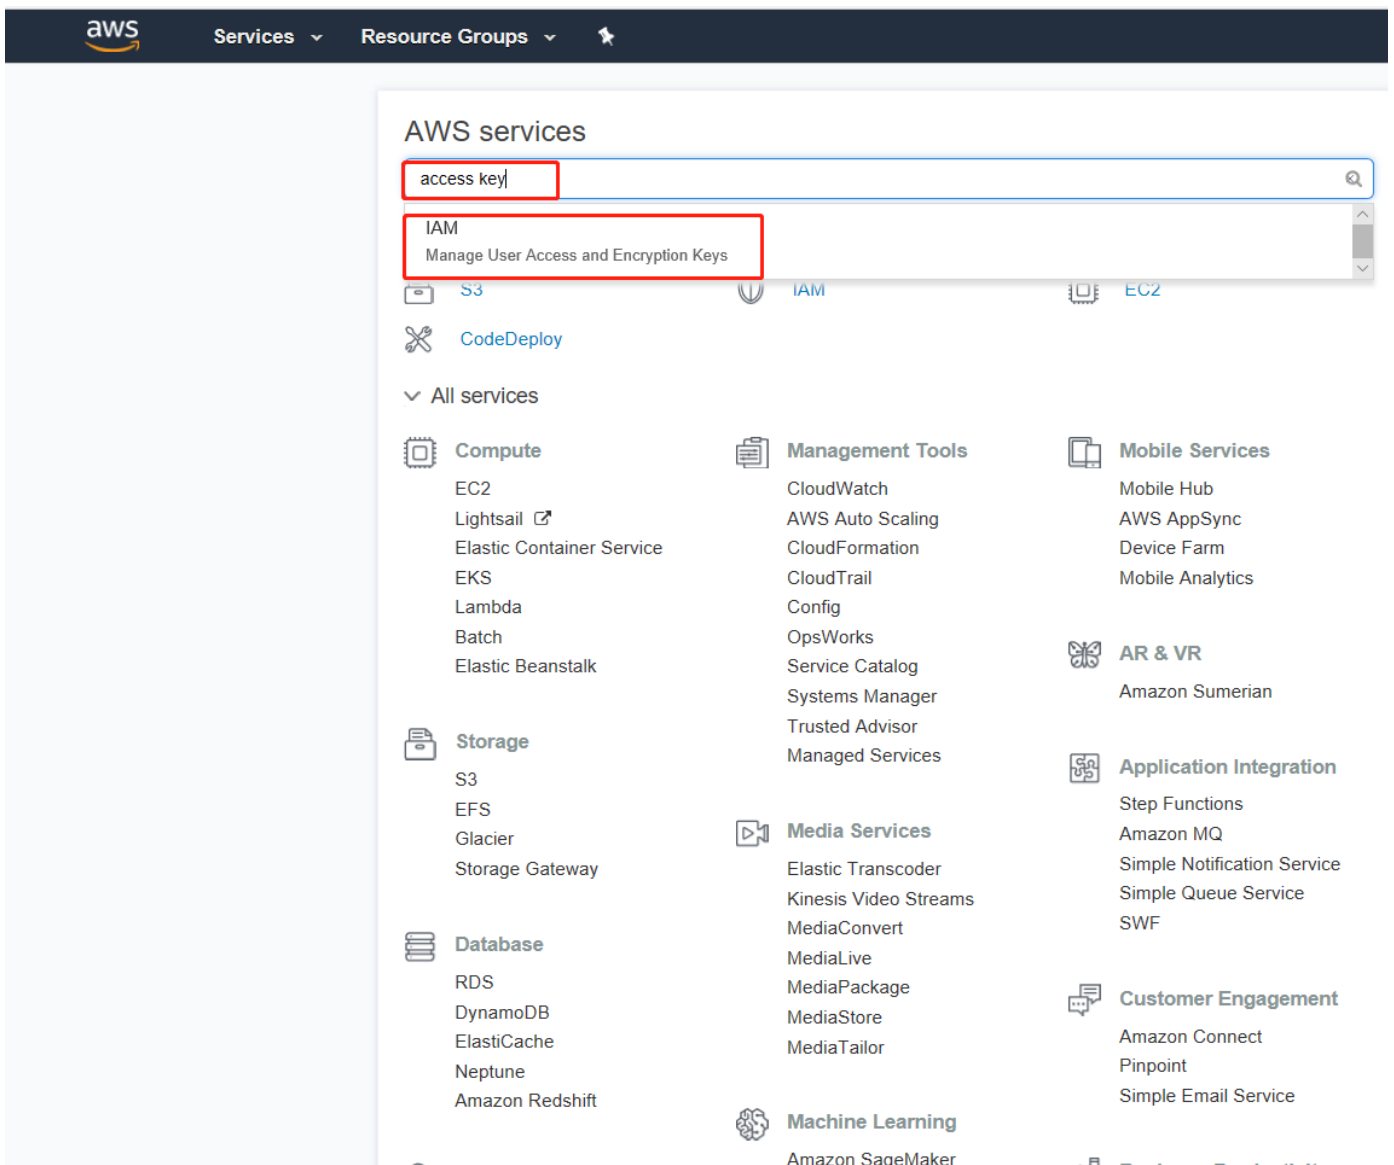

获取AWS的Access Key ID 和 Secret Access Key 是你访问AWS的依据，比如S3的“使用预签名 URL 上传对象”。

1、登录AWS控制台

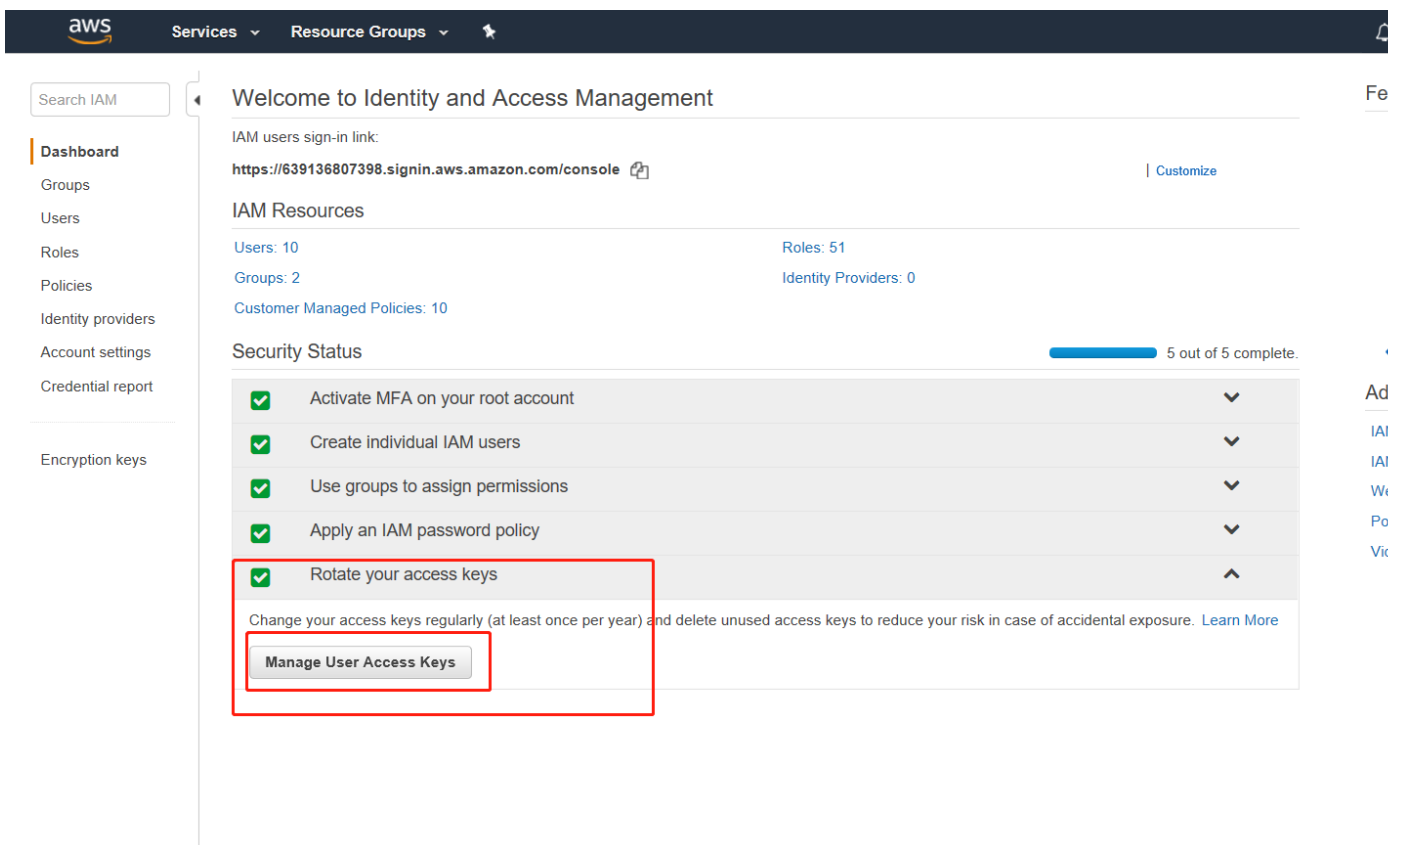

2、在“AWS services”搜索框中搜索“access key”

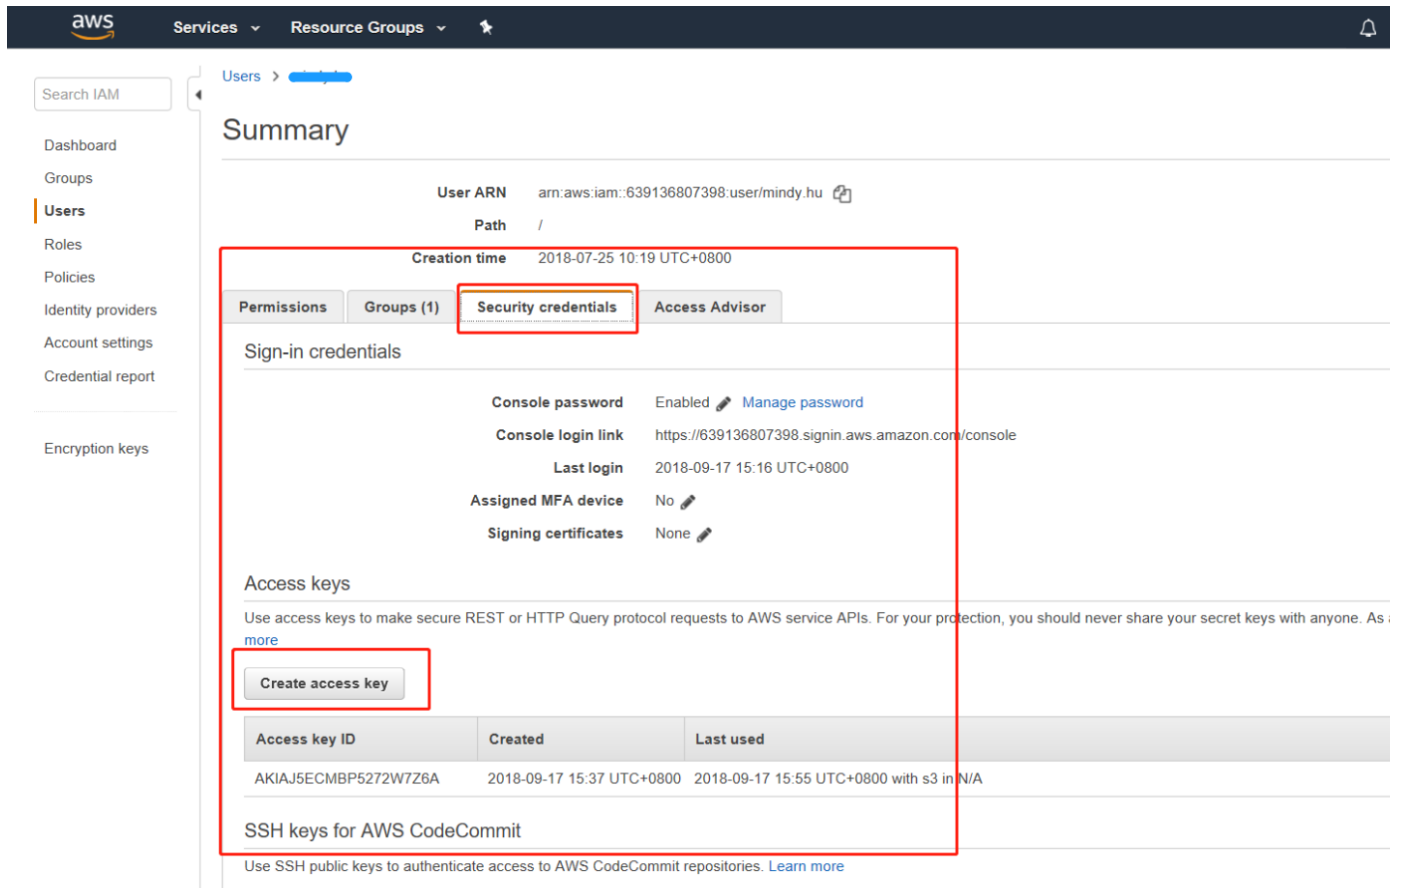

3、点击搜索跳出的选项：IAM

4、点击“Rotate your access keys”，点击Button：Manage User Access Keys

5、选择Security credentials标签，点击Button“Create access key”自动生成Access Key ID 和 Secret Access Key

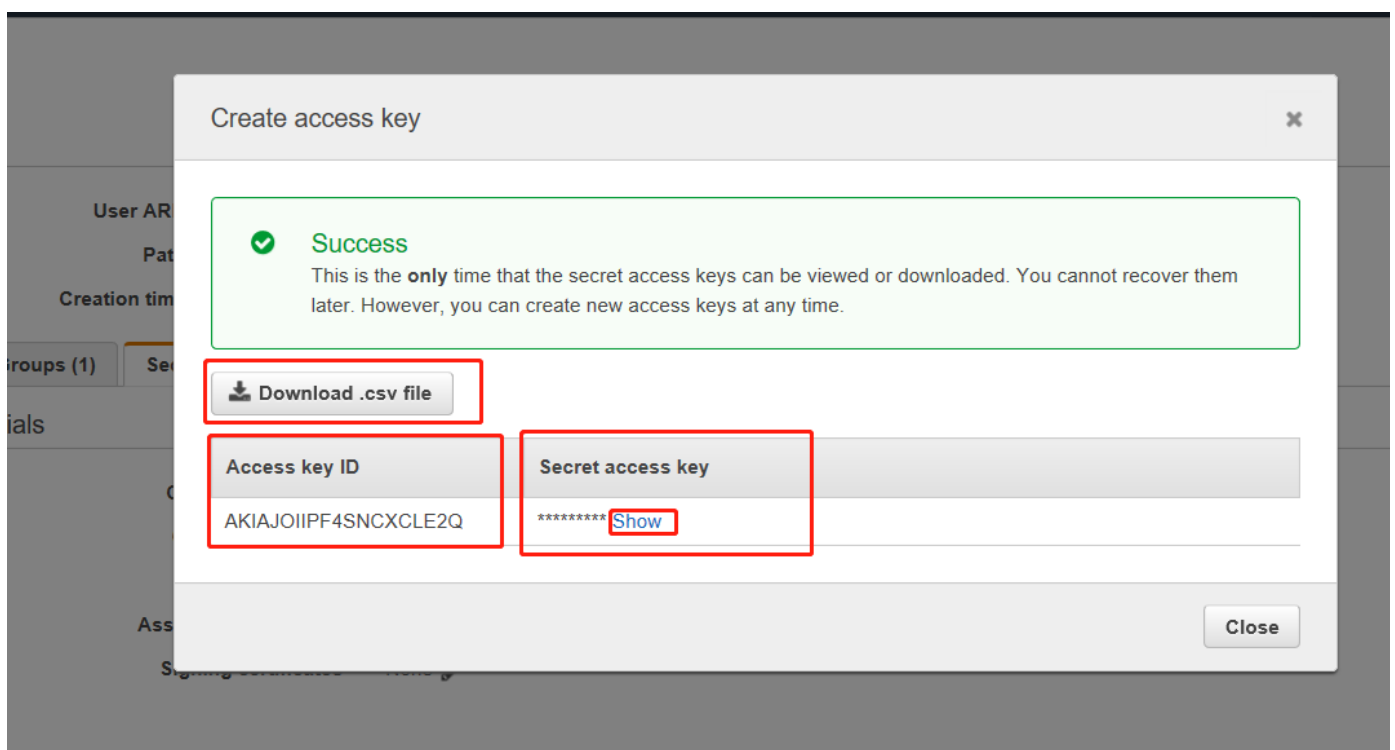

The screenshot shows the AWS IAM console 'Summary' page for a user. The 'Security credentials' tab is selected. Under 'Sign-in credentials', the 'Console password' is enabled. Under 'Access keys', the 'Create access key' button is highlighted. Below this, a table lists the generated access keys:

Access key ID	Created	Last used
AKIAJ5ECMBP5272W7Z6A	2018-09-17 15:37 UTC+0800	2018-09-17 15:55 UTC+0800 with s3 in N/A

Below the table, the 'SSH keys for AWS CodeCommit' section is visible. The 'Show' button next to the secret access key is highlighted.

6、弹框显示生成的Access Key ID 和 Secret Access Key，点击Button“Download.csv file”下载，这是唯一的机会可以保持Access Key ID 和 Secret Access Key，下发显示了Access Key ID 和 Secret Access Key，点击“Show”可查看Secret Access Key，内容与下载的

accessKeys.csv 内容一致。如果以后无法找到Secret Access Key，可以删除重新创建一对。

The screenshot shows the 'Create access key' dialog box. The 'Success' message is displayed. The 'Download .csv file' button is highlighted. Below it, the 'Access key ID' and 'Secret access key' are shown. The 'Show' button next to the secret key is highlighted.
